Art Unit: 2154

**Restriction:**

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-24, drawn to method of configuring a firewall, classified in class 713, subclass 201.

II. Claims 25-120, drawn to the event handling and event notification, classified in class 719, subclass 318.

III. Claims 121-166, drawn to the computer network monitoring, classified in class 709, subclass 224.

IV. Claims 167-174, drawn to data file system maintenance, classified in class 707, subclass 201.

The inventions are distinct, each from the other because of the following reasons: Inventions I, II, III and IV are related as subcombinations usable together. The subcombinations are distinct from each other if they are shown to be separately usable together. In the instant case, the invention I has a separate utility such as configuring a firewall based upon received input data. Invention II is directed to event handling and event notification in the network. Invention III is directed to computer network monitoring. Invention IV, on the other hand, is clearly directed to a different subject matter than inventions I, II and III.

Art Unit: 2154

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
